Technology Stack

Date	03 July 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	**Architecture Component / Layer**	**Technology Chosen**	**Justification / Purpose**
1	**Frontend / Client-Side**	*HTML, CSS,*	*Provides a simple, responsive, and user-friendly interface for applicants to enter details and view prediction results.*

2	**Backend / Server-Side**	*Python, Flask*	*Flask integrates the trained Machine Learning model and processes user input to generate predictions efficiently.*
3	**Database / Data Storage**	*SQLite, CSV Dataset (creditcard.csv)*	*Stores applicant details and prediction history efficiently for the web application.*
4	**Cloud / Hosting / Deployment**	*Local Flask Server*	*Runs the Flask web application locally for prediction, testing, and demonstration purposes.*
5	**Version Control & CI/CD**	*Git & GitHub*	*Tracks project versions, enables collaboration, and securely stores project files.*

6	**Third-Party APIs / Other Tools**	*Jupyter Notebook, Pandas, NumPy, Matplotlib, Seaborn, Scikit - learn*	*Used for data preprocessing, visualization, machine learning model development, evaluation, and experimentation.*
