

Solution Requirements

Date	03 July 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Applicants enter the required personal and financial details to predict credit card approval.</i>	High
2	Authorization levels	<i>Applicants can submit and view applications. Bank Officers/Admin can verify applications and view prediction reports.</i>	High
3	External interfaces	<i>The system uses the Credit Card dataset stored in CSV format and interacts with the</i>	Medium

		<i>Machine Learning prediction model.</i>	
4	Transactions processing	<i>The system accepts applicant details, validates the data, processes it through the ML model, and generates approval or rejection results.</i>	High
5	Reporting	<i>The system displays prediction results, applicant status, and generates reports for bank officers.</i>	High
6	Business rules, etc.	<i>Applications are approved only if eligibility conditions are satisfied. Invalid or incomplete applications are rejected.</i>	High
7	Compliance to laws or regulations	<i>Applicant personal information must be kept confidential and used only for prediction purposes following data privacy principles.</i>	Medium
8	Other	<i>The system stores prediction history and allows users to download prediction reports in CSV format.</i>	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	<i>The prediction result should be generated quickly.</i>	<i>Prediction in less than 3 seconds</i>
2	Scalability	<i>The system should support many application records without affecting performance.</i>	<i>Supports 50,000+ records</i>
3	Security & Data Privacy	<i>Applicant information should be securely stored and protected.</i>	<i>Password protection and encrypted data storage</i>
4	Reliability & Availability	<i>The system should operate without frequent failures.</i>	<i>99% system availability</i>
5	Usability & Accessibility	<i>The interface should be simple and easy for applicants and bank officers.</i>	<i>Easy navigation with clear instructions</i>
6	Other	<i>The ML model should be easy to update when new training data becomes available.</i>	<i>Supports future model retraining</i>
