

Coding & Solution

Date	10 July 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/jayanthi-7702/Credit-Card-approval-Prediction
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Flask
Key Features Implemented	• Credit Card Approval Prediction using Machine Learning • Flask Web Application • SQLite Database Integration • Prediction History • Dashboard with Pie Chart and Bar Chart • CSV Download
Pending / Incomplete Features	No major pending features. Minor UI enhancements and online deployment can be added in future.
Setup / Run Instructions	1. Install the required Python packages using requirements.txt. 2. Place credit_card_model.pkl in the project folder. 3. Run app.py using Python. 4. Open http://127.0.0.1:5000 in a web browser. 5. Enter applicant details and click Predict.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project successfully predicts credit card approval using a trained machine learning model integrated with a Flask web application. It includes prediction history, dashboard visualization, and CSV report download features. The application follows a modular structure for easy maintenance and future enhancements.
